

4site offers telecoms operators, utilities, data centres, retailers and infrastructure owners a specialised team to support your onsite power and energy management and maintenance requirements.

prevent disasters

save money

power on

Power Audits

4site will audit the power on your site, checking AC/DC loads, cooling parameters and all critical equipment. You'll receive a full report on your power consumption, identifying any issues, and with recommendations to rectify. We will also conduct the remedial works if required.

Thermal Imaging

Did you know you can often reduce insurance premiums with thermal imaging? Annual reporting of your power supply using thermal imaging, means any potential risks can be identified and steps taken to restore circuits to normal.

Multi-metering

4site will install individual meters for multi-tenant use where the facility is operating off a single electricity supply connection. We will also upgrade the supply to meet standards and provide a certificate of compliance issued in conjunction with the ESB.

We provide onsite power services on both single site and large distributed sites nationwide. 4site has the expertise and experience in-house with a highly qualified team of electrical engineers, DC experts and technicians, working to RECI and best in class industry standards.

Our well recognised networks design and build capabilities include design, installation and commissioning of power and energy requirements to provide optimal operation of your installation.

Benefits of 4site Onsite Power Support

- 4site has the team, the expertise and the experience to be your partner for onsite power support.
- We have the scale and the scope to offer our service nationwide so no matter your location or whether single or multi-site we have the team in place to deliver.
- We operate to the highest standards and use the best tools to carry out inspections, including infrared thermal imager, midtronics battery analyser, Fluke Multi Function Tester - all calibrated and tested.

Maintenance & Upgrade Services

- DC site works
- Battery analysis and replacement
- PSU swap
- Free cooling installs
- Generator works

ESB Connections & Metering

- Multi-metering
- Mains upgrades
- Meter readings
- Testing & verification
- Certificate of compliance

Customised Power Solutions

- Power audit
- Thermal imaging
- Testing & verification
- Design

About us

In business for over 10 years, 4site has been designing and building the technical solutions that deliver the network infrastructure of tomorrow.

We provide a range of turnkey engineering services for telecoms operators, utilities, infrastructure owners and enterprises.

We operate to the highest standards. Our focus is on the quality of what we deliver and providing value to our customers in each project that we undertake. We have highly skilled and accredited teams of engineers, surveyors, property specialists and safety experts.

In line with our commitment to quality we have attained ISO quality standards, ISO 9001, ISO14001, OHSAS 18001.

We're already providing our services on an ongoing basis for customers, including:
